CBO’s Economic Projections for 2017 to 2027

The tables in this appendix expand on the information in Chapter 2 by showing the Congressional Budget Office’s economic projections for each year from 2017 to 2027 (by calendar year in Table C-1 and by fiscal year in Table C-2). CBO’s projections for 2021 to 2027—unlike its projections for 2017 and 2018—are not based on forecasts of cyclical developments in the economy. Rather, they are based on projections of underlying trends in key variables that determine the growth of potential output, such as the size of the labor force, the number of hours worked, capital investment, and productivity—that is, the trends those variables follow after the effects of business-cycle fluctuations are removed. CBO also considers the effects on those variables of the federal tax and spending policies specified in current law. CBO’s projections for 2019 and 2020 do not reflect expected cyclical developments in the economy. Instead, they serve as transitions to the values that CBO projects for the 2021–2027 period.

GDP = gross domestic product; PCE = personal consumption expenditures.

a. Values for 2016 do not reflect the values for GDP and related series released by the Bureau of Economic Analysis since early December 2016.
b. Nominal GDP adjusted to remove the effects of inflation.
c. Excludes prices for food and energy.
d. The consumer price index for all urban consumers.
e. Actual value for 2016.
f. The employment cost index for wages and salaries of workers in private industries.
g. Calculated as the monthly average of the fourth-quarter-to-fourth-quarter change in payroll employment.
